

- Three kinds of version will be provided in the future:
- For group use: Linux-based version
 - For small group/personal use: USB-ELN, windows/ Mac-based version
 - Cloud version, Supported by World Research on Cloud, MS Azure (2013)
- 將提供三種 ELN 版本：
- 大型實驗室群組版本：相容於 Linux 平台環境
 - 中小型實驗室與個人單機版本：USB-ELN, 可相容於微軟視窗/麥金塔 作業環境
 - 微軟 Azure 雲端平台(微軟公司全球雲端研究贊助 - 2013)

快速病原檢測開發平台

病原檢測晶片與基因晶片線上設計系統 Unique Probe Selector (UP) BMC Bioinformatics (2008) BMC Genomic (2010)

■ <http://array.iis.sinica.edu.tw/ups>

UPS is a probe design tool for hybridization in low and high throughput experiments. UPS selects unique probe for submitted sequences and evaluates probe-to-target hybridization under a user-defined condition *in silico* to ensure the high performance of hybridization as well as low possibility of non-specific reaction.

UPS 為高專一度探針線上設計工具，所設計的探針可用於小規模核酸雜交實驗，如南方墨點法，或微陣列晶片般的大規模雜交實驗，並可應用於環境基因體學、非模式生物基因體之基因表現，與病原體檢測等的小型晶片設計。

Unique Probe Selector

複雜生物巨分子交互網路分析平台
[Hub Object Analyzer](#), (HUBBA),
Nucleic Acids Res(2008)

<http://hub.iis.sinica.edu.tw/hubba>

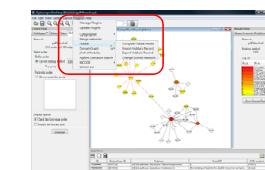

Hubba is a powerful prediction tool for hub/essential proteins with a user-friendly interface. Hubba can decipher the critical keys inside biochemical pathways and complex network, there will be significant clues to provide candidates for gene knockout and potential drug-targets for developing novel treatment in cancer cells and emerging pathogens. Here we also converted Hubba into cytoHubba, a Cytoscape Plug-in for Hub Object Analysis in Network Biology

Hubba 線上分析平台，可用以分析生物複雜網路交互作用系統中的重要樞紐分子，以圖像化手法呈現重要性來對樞紐蛋白質排名，並顯示這些重要結點之間的關連性，協助辨識疾病細胞內與感染過程中的重要網路次模組，及特定基因群所關連的小網路，提供網路醫學研究與新的治療方法的開發。為了利用 Cytoscape 的輔助與其軟體能見度，與 cytoscape 平台其他 plug-in 的協助，我們將 hubba 變成 cytoscape 的一個分析模組，稱為 cytoHubba，得以提供更多生物學家對龐大的基因網路，採取更精闢、便利的分析，進而提升生物網路分析的準確度。
